WHICH MATERIAL DO I CHOOSE?	
<b>Aluminium</b>	Aluminium is one of the most durable materials making it perfect for outdoor and indoor use. Aluminium is fire resistant and non-combustible, as well as being rust-free.
<b>Stainless Steel</b>	Stainless steel is a superior material with unmatched strength, durability, and corrosion resistance. Has an attractive, stylish and modern appearance.
<b>Mild Steel</b>	Mild steel has low carbon content, and it is more ductile than stainless steel. Mild steel is more weldable than stainless steel. Needs protective treatment from the elements to prevent corrosion.
<b>Coreten Steel</b>	Has a great rustic look. Corten Steel thrives outdoors in its unfinished state. One of Corten Steel's most impressive features is its self-protective capability. The same rust-like layer that grants the material its incredible durability also has self-healing properties.

\* Ask for our Dulux Powder Colour Selector PDF to select your colours or head to <https://www.dulux.com.au/colour/> to search the entire range. Pricing is for standard colours, pearlescent, texture and ripple effect will incur a higher price, quote provided on request.

^ Standard sizes are listed, other sizes can be fabricated and will be quoted on request.
